Summary

Software engineer with over seven years of professional experience in backend development and embedded software. I have used Linux as my daily operating system for more than 15 years, building a strong foundation in system level programming and troubleshooting. Core skills include Python, C/C++, Bash, Rust, TypeScript, networking, automation, and developer tooling. Recent work includes Python based LLM tooling and integrations, supported by training in context engineering, evaluation, and AI product development.

Experience

Sii Poland

Embedded C Developer · Intel RDMA firmware **Periods:**

- 2026.07 - Present
- 2024.05 - 2025.09.

Working through Sii Poland on Intel's RDMA network card firmware across two engagements on the same project.

Team size: 10 currently and 15 previously.

- Develop new firmware features and implement RDE manageability.
- Investigate and fix firmware bugs.

Internal tools for the Sii team on this project:

- Learned TypeScript on my own initiative and developed two Visual Studio Code extensions and Python utilities supporting firmware builds, diagnostics, NVM management and deployment, and UART logging.
- Currently introducing an AI-assisted project knowledge base "second brain" as an internal side project for the team.

Technologies: Embedded C, RDMA, Windows, PowerShell, Linux, Bash, Python, TypeScript

2026.04 - 2026.07 · Python Developer Extended a Python-based test automation framework for Open Edge Platform applications in the `edge-ai-libraries` repository.

Team size: 8.

- Refactored legacy framework components to improve readability, maintainability, and reuse.
- Redesigned and simplified the framework's logging system.
- Added reusable helpers for Docker Compose and Kubernetes/Helm-based validation.
- Implemented automated tests for selected Open Edge Platform applications, including HTTP endpoint checks, stream validation, and service readiness verification.
- Improved failure diagnostics with clearer assertions, timeout handling, and state verification.
- Debugged issues involving containers, pods, services, port forwarding, and application runtime behavior.

Technologies: Python, Docker, Docker Compose, Kubernetes, Helm, HTTP

2022.01 - 2024.05 · Python Developer Validated Intel GPU drivers on Linux using GDB-oneAPI and scientific applications written in C++ with DPC++ and SYCL. Worked with an international team of 6 based in Intel's Munich office.

Concurrent with the Linux System Administrator role from 2022.01 to 2023.05.

- Developed a Python framework for environment setup, application builds, and automated tests using custom GDB scripts.
- Integrated C++/DPC++/SYCL applications into the build and validation workflow.
- Contributed C++ fixes supporting validation tasks.

Technologies: Python, C++, CMake, Bash, GDB-oneAPI, DPC++, SYCL, Linux

2019.01 - 2023.05 · Linux System Administrator Validated Intel RDMA network drivers across multiple Linux distributions, including Red Hat, SLES, Ubuntu, CentOS, Debian, Rocky Linux, openEuler, and Anolis.

Team size: 6.

- Installed, configured, and maintained Linux validation environments.
- Maintained the automation framework using Bash, Python, and Ansible.
- Ran validation tests and reported and tracked driver bugs.

- Assessed candidates during recruitment and mentored two engineers for approximately one year each.

Technologies: Linux, RDMA, Bash, Python, Ansible, Tcl

Freelance

2025.11 - Present · Freelance Python / Django Developer (part-time) Developing and maintaining a large legacy Django e-commerce platform.

Part-time freelance engagement, concurrent with Sii roles since 2026.04.

- Develop backend features, fix bugs, and maintain existing business logic.
- Implement PDF and document generation using templates.
- Automate VM-based development environments with Ansible.
- Support deployment and infrastructure-related tasks.

Technologies: Python, Django, PostgreSQL, Celery, Redis, Ansible, Linux, Bash

Natek Poland

2018.09 - 2019.01 · C++ Developer Worked on software for secure smartcard chips used in payment cards and identity documents.

- Maintained a large C++ codebase and fixed bugs.
- Collaborated on secure software development processes while gaining familiarity with hardware-related constraints.

Technologies: C++, Windows, Cygwin

Lodz University of Technology

2015.01 - 2016.07 · Lab Technician Supported experimental and medical physics laboratories.

- Administered laboratory systems and maintained experimental and medical physics equipment.
- Developed a face recognition application using OpenCV.
- Helped design lab exercises and supervised students' preparation and measurements.

Technologies: OpenCV

Skills

- **Programming languages:** Python, C, C++, Bash, TypeScript, Rust

- **Backend & databases:** Django, PostgreSQL, Celery, Redis, SQLAlchemy
- **Systems & automation:** Linux, RDMA, Docker, Docker Compose, Kubernetes, Helm, Ansible
- **AI/LLM (practical work):** Python-based tooling and integrations, AI-assisted internal team knowledge management
- **AI/LLM (training):** LLM API integration, context engineering, evaluation, AI product development
- **Languages:** English (B2)

Courses & Training

Course	Provider	Date
AI_devs 4 - Builders	BRAVE	2026.10
AI Product Heroes 2	BRAVE	2026.09
AI for Python Developers	Future Skills Institute	2025.06
Introduction to Machine Learning	Future Skills Institute	2025.05
Advanced Clean Code and Refactoring	Future Skills Institute	2025.01
UML Fundamentals	Future Skills Institute	2024.09
Design Patterns in Python	testuj.pl	2023.10
Design Patterns in C++	testuj.pl	2023.09

Education

- **M.Sc. in Physics** (Optoelectronics), Lodz University of Technology, 2018
- **B.Sc. in Physics** (Computational Physics), Lodz University of Technology, 2015

Publications

- **Analytical Kinetic Block Model of Crystal Mother Phase Multilayer Interface**
  Scientific Bulletin of Lodz University of Technology, 2015
