Summary

I am a software engineer with over 7 years of professional experience, working mainly in backend and embedded development. I have been using Linux as a daily driver for more than 15 years, which gives me a strong foundation in system-level programming and troubleshooting. My expertise includes C, C++, Python, Bash, Rust, and TypeScript, with most of my projects focused on the network stack. In recent work, I have also been expanding into Python-based LLM development, including tooling, integrations, and practical applications of language models. I enjoy mentoring, sharing knowledge, and supporting my colleagues, and I am eager to keep learning and broadening my expertise.

Experience

2025.11 - Present · Python / Django Developer

Developing and maintaining a large legacy e-commerce platform built with Django. Responsible for backend features, bug fixing, document generation, environment automation, and deployment-related improvements in an older production stack. Working with Python, Django, PostgreSQL, Celery, Redis, Ansible, Linux, and VM-based development infrastructure.

Responsibilities:

- Feature development in a legacy Django application
- Bug fixing and maintenance of existing business logic
- PDF/document generation and template-based rendering
- Environment setup and automation with Ansible
- Support for deployment and infrastructure-related tasks

Skills: Python, Django, PostgreSQL, Celery, Redis, Ansible, Linux, Bash

Sii Poland (6 years 9 months)

2024.05 - 2025.09 · Embedded C Developer

Part of a team developing and maintaining the RDE protocol in the firmware of Intel RDMA network cards.
As a side project, I learned TypeScript and developed two Visual Studio Code extensions for my team, which significantly optimized project processes. Additionally, I created several helpful Python tools that streamlined everyday development and validation tasks.
Team size: 15.

Responsibilities:

- Developing new features
- Bug fixing
- Implementing RDE manageability

Skills: Embedded C, Network Stack, RDMA, Windows, PowerShell, Linux, Bash, Python, TypeScript

2022.01 - 2024.05 · Python Developer

(Worked concurrently with the Linux System Administrator role from 2022.01-2023.05)

Part of an international team based in Intel's Munich office. The primary objective of the project was to validate Intel GPU drivers on Linux, using Intel's GDB-oneAPI across a variety of scientific applications written in C++ with DPC++ and SYCL extensions.
Team size: 6.

Responsibilities:

- Developing a Python-based framework responsible for setting up the environment, compiling assigned applications, and running automated tests (via custom GDB scripts)
- Collaborating closely with C++ codebases, ensuring proper build and test integration of scientific applications (C++/DPC++/SYCL)
- Contributing minor fixes and adjustments in C++ code to support validation tasks

Skills: Python, CMake, Bash, C++, GDB-oneAPI, Linux

2019.01 - 2023.05 · Linux System Administrator

(Worked concurrently with the Python Developer role from 2022.01-2023.05)

The main project goal was to validate Intel RDMA network drivers for silicon NICs under various Linux distributions (RedHat, SLES, Ubuntu, CentOS, Debian, Rocky Linux, OpenEuler, Anolis). Alongside the technical responsibilities, I acted as a technical assessor during multiple recruitment processes and

mentored two engineers for about one year each, fostering their professional growth.
Team size: 6.

Responsibilities:

- Installing, configuring, and maintaining Linux operating systems
- Maintaining the automation framework (Bash, Python, Ansible)
- Running validation tests
- Reporting and tracking bugs

Skills: Linux system administration, Network Stack, RDMA, Bash, Python, Ansible, TCL

Natek Poland (3 months)

2018.09 - 2019.01 · C++ Developer

Part of a team developing C++ software for secure smartcard chips used in payment cards and identity documents. Contributed mainly to code maintenance and bug fixing, while becoming familiar with secure coding practices, hardware-related constraints, and large-scale C++ codebases.

Responsibilities:

- Maintaining and improving existing C++ codebase
- Bug fixing
- Collaborating with the team on secure software development processes

Skills: C++, Windows, Cygwin

Lodz University of Technology (1 year 6 months)

01.2015 - 07.2016 · Lab Technician

Resposibilities:

- System administration at experimental physics lab
- Development of face recognition application using OpenCV
- Maintaining laboratory equipment at experimental physics lab., and medical physics lab.
- Assistance during new lab. exercises design
- Supervising students in the field of preparation for the exercises and correctness of measurements

Education

- **M.Sc. in Physics** (Optoelectronics), Lodz University of Technology, 2018
- **B.Sc. in Physics** (Computational Physics), Lodz University of Technology, 2015

Publications

- **Analytical Kinetic Block Model of Crystal Mother Phase Multilayer Interface**
  Scientific Bulletin of Lodz University of Technology, 2015

Skills

Programming languages: C++, Python, Bash, Rust, TypeScript
Languages: English (B2)
DevOps: Docker, Ansible
DataBase: PostgreSQL (via SQLAlchemy ORM)
